Give Earth a Smile

The Re-Leaf Project

2026

Objective

Build public understanding of sustainable recycling through weekly social media education and physical campaign cards made entirely from recycled paper. The project helps people identify what can and cannot be recycled while showing that educational materials can be produced without harvesting new trees.

Give Earth a Smile

Challenges & Opportunities	• Recycling rules vary by community and can be confusing to the public. • Contaminated or incorrectly sorted items can reduce the value of recyclable materials. • Short-lived online information may not remain visible when people make disposal decisions. • Printed awareness materials can create new waste if they rely on virgin paper. • There is an opportunity to pair recurring digital education with durable, low-impact physical reminders.
Proposed Solution	• Publish one educational social media post each week about sustainable recycling practices. • Explain what commonly belongs in recycling and what should be kept out. • Create campaign cards from paper derived from leftover sawmill wood chips. • Use 100% recycled material so no new trees are harvested for card production. • Distribute more than 100 cards to extend the campaign into everyday community spaces.
Project Benefits	The Re-Leaf Project combines repeated digital learning with tangible community outreach. Weekly posts make practical recycling information easier to access, while the campaign cards offer a lasting reminder of what to recycle and what not to recycle. Because the cards are made from 100% recycled paper sourced from leftover sawmill wood chips, the campaign demonstrates its message through its own material choices. More than 100 cards have been created and distributed, expanding public awareness while avoiding the harvest of new trees for campaign materials.

Give Earth a Smile

Project Overview

Give Earth a Smile created The Re-Leaf Project as an ongoing recycling awareness campaign that helps the public build practical, sustainable recycling habits. The project uses both digital education and recycled campaign cards to make accurate recycling guidance visible, memorable, and easy to apply.

Format: One educational social media post each week, supported by in-person distribution of recycling facts campaign cards made from 100% recycled paper derived from leftover sawmill wood chips.

Objective: Raise awareness of what to recycle and what not to recycle, reduce contamination caused by incorrect disposal, and model responsible material use without harvesting new trees.

Target Audience and Campaign Reach

- Primary Audience: Members of the public seeking clear, practical recycling guidance.
- Secondary Audience: Students, families, schools, and community groups that can share recycling knowledge with others.
- Digital Outreach: Weekly social media posts that explain sustainable recycling practices and address common sorting mistakes.
- Physical Outreach: More than 100 recycling facts cards created and distributed as lasting educational reminders.
- Materials Standard: Campaign cards made from 100% recycled paper sourced from waste leftover sawmill wood chips, with no new trees harvested for production.

Give Earth a Smile

Overview of Implementation Phases

Phase 1: Research and Planning		
Activities: • Identify common recycling questions and misconceptions • Research clear, locally adaptable recycling guidance • Set a weekly publishing schedule and campaign goals	**Timeline / Duration:** Initial planning period	**Responsibility:** • Project Leads • Content Team
Phase 2: Content and Card Design		
Activities: • Write concise recycling facts and sorting guidance • Design weekly social media posts • Prepare campaign cards for recycled-paper production	**Timeline / Duration:** Before each release	**Responsibility:** • Content Team • Design Team
Phase 3: Production and Distribution		
Activities: • Produce cards using 100% recycled paper • Confirm no new trees are harvested for materials • Distribute 100+ cards through community outreach	**Timeline / Duration:** Campaign distribution cycle	**Responsibility:** • Project Leads • Volunteers
Phase 4: Weekly Education and Review		
Activities: • Publish one social media post each week • Reinforce what to recycle and what not to recycle • Review engagement and refine future topics	**Timeline / Duration:** Weekly and ongoing	**Responsibility:** • Social Media Team • Project Leads

Recycling Awareness Campaign Plan

Activity 1: Weekly Social Media Education

Objective: Provide consistent, accessible recycling education.
Description: Publish one post each week explaining sustainable recycling practices, common sorting mistakes, and the environmental value of responsible disposal.
Outcome: The public receives recurring, shareable guidance that can improve everyday recycling decisions.

Activity 2: Recycling Facts Campaign Cards

Objective: Turn recycling guidance into a durable physical reminder.
Description: Create cards that clearly explain what to recycle and what not to recycle. Each card is made from 100% recycled paper derived from waste leftover sawmill wood chips.
Materials Commitment: No new trees are harvested in the campaign card-making process.

Activity 3: Community Distribution

Objective: Extend campaign information beyond social media.
Description: Distribute the recycling facts cards through community outreach and person-to-person sharing.
Outcome: More than 100 cards place practical recycling guidance directly into the hands of community members.

Activity 4: Ongoing Learning and Improvement

Objective: Keep the campaign relevant and useful over time.
Description: Review recurring questions and audience engagement to select future weekly topics and clarify confusing recycling practices.
Outcome: The campaign grows as an ongoing educational resource rather than a one-time awareness effort.
